STEVEN DROUIN

THE RIGHT EXPERIENCE. THE RIGHT PERSPECTIVE.

Steven Drouin understands what makes technology work in construction because he has spent his career learning the business from the ground up.

Raised in a blue-collar family, Steven developed an early appreciation for hard work, practical problem-solving and understanding how things work. He began his career as an **electrical apprentice in 1994**, eventually moving through operations and purchasing into technology leadership. By 1998, he was already finding new ways to put technology to work, leading the digitization of purchasing processes across New England. He earned his Microsoft Certified Systems Engineer (MCSE) certification in 1999, further building the technical foundation behind his work.

Over 30 years in the construction industry, Steven has partnered with teams across **estimating, project management, field operations, workforce management, prefabrication, procurement, finance and people operations**. He has evaluated, selected, implemented and integrated technology from within a contracting organization, ultimately leading enterprise technology strategy and business transformation. He knows the demands of construction operations and understands what it takes to make technology useful beyond the sales pitch.

For over 25 years, Steven has contributed to the industry as a **speaker, panelist and advisor.** Through years of collaboration with construction technology providers and participation on industry advisory boards, he has developed a perspective that extends beyond the contractor's office. He understands the challenges of building technology just as well as the challenges of putting it to work, bringing practical insight to product development, workflow design, integration, implementation and adoption.

Through Drouin Technologies, Steven works with both construction companies and the technology providers working with them. His work includes **technology strategy, ERP selection, system integration, implementation oversight, data analytics and advanced AI**. He helps contractors see where technology can take their business, make the decisions to get there and stay ahead of what's next. He helps technology companies understand the realities of the industry, anticipate what contractors need and build solutions that move the industry forward.

His approach is straightforward: understand the work, see the opportunity, then put technology to work.

BUILT ON BOTH SIDES OF THE INDUSTRY

FOR CONSTRUCTION LEADERS

Your technology should work the way your business does and support where you want to go. Make strategic decisions about your systems, investments and technology roadmap with someone who understands the realities of construction firsthand. Identify opportunities, make your technology work harder and position your business for what's next.

FOR TECHNOLOGY INNOVATORS

You need to understand more than what your technology can do. You need to know how it performs in the environments, workflows and businesses you're building it for. Gain a contractor-side perspective, informed by years of evaluating, implementing and working with the technology your customers rely on. Sharpen your product strategy, strengthen implementation and create solutions that resonate in the real world.

30+ YEARS CONSTRUCTION EXPERIENCE

25 + YEARS CONFERENCE SPEAKER

25+ YEARS ENTERPRISE TECHNOLOGY LEADERSHIP

PUBLISHED INDUSTRY CONTRIBUTOR

PANELIST & PODCAST GUEST

"TECHNOLOGY ALONE DOESN'T DRIVE SUCCESS. KNOWING HOW TO PUT IT TO WORK DOES."

Drouin Technologies helps companies bridge the gap between what products promise and what contractors actually need.
We create solutions with greater relevance, adoption and staying power.
